CASE STUDY: PAYAL HOTEL ENTERPRISES INC

Payal Hotel Enterprises Inc, DBA: Hampton Inn and Suite

Payal Hotel Enterprises Inc, founded in Oklahoma, OK. Payal Enterprises is a group of Entrepreneurs who specialize in Hospitality Management. The group consists of 32 individually owned hotel and motels. Payal Enterprises prides it self in being a minority owned organization. One of the goals of the Hampton Inn and Suites Big Spring, is to provide an enjoyable environment the minute guests check into one of their guestrooms.

CHALLENGE

In 2009 Hampton Inn and Suites Big Spring was ready to open their doors to the public, but the following challenges threaten to push the grand opening dead line further off, and cause thousands of dollars in finance charges if the motel was not operational on time. The Motel needed a City Inspection before ONCOR would energize the meter.

If the meter was not energized in time, the Elevator Manufacturer would have to leave the site and would not be available for a month. Without the functioning Elevator Hampton Inn and Suites would not be able to open their doors to the public. All of these challenges would have to be completed in 2 business days before the Elevator was scheduled for installation.

SOLUTION

US Energy Consultants is pleased to have been chosen as the Hampton Inn and Suites Big Spring Energy Broker of choice and recognizes the opportunity to support the motel in achieving their energy sustainability goals. With timely and efficient communication the City Inspection Permit was acquired and forwarded to ONCOR. Through the courteous and continues communication with the utility the meter was energized the same day.

RESULT

Through USEC intimate relationships with America's top energy suppliers and utilities, USEC helped Hampton Inn and Suites Big Spring open their doors to the public on time and without further costly delays.
